

Greetings from Hikonobu Ise, Chairman:

For nearly 100 years since the Ise corporation was first established, we have studied the development of technology for egg production and food development. Today, the results of these efforts give people true confidence and a high level of acceptance of the quality of our products, naturally, in Japan and on a global scale, including Ise America. As a food manufacturer there could be no greater pride nor joy for us.

Our lives are filled with much abundance, and yet, we hear of the great concerns people have for the global environment which have created considerable interest in human ecology and health trends, which also means increased concern about the safety and reliability of the food we eat.

We have always responded very quickly to these kinds of consumer needs and keenly feel that to provide excellent products for your dining pleasure is our mission, the driving force behind the pioneering efforts in the development of functional eggs, including the ISE EGG with DHA.

We appreciate your continued and increased patronage and support.

- 1912: Started a chicken genetics and breeding improvement business.
- 1914: Started artificial incubation using electrical heat.
- 1929: Consolidated farms to cope with the farm recession. Created a venture feed mixing factory and egg shipping plant; jointly managed Sanno Animal Husbandry Association. Received a citation from the Ministry of Agriculture and Forestry.
